

Systems Engineering and Integration

Your Partner in Mission Success

We implement customer vision through forward-thinking solutions using an enterprise-level approach.

For decades, ENSCO has been providing scalable systems engineering and integration solutions for customers with critical missions where risk is not an option. We bring together the technical depth, proven processes and direct domain and mission experience to our customers so they can execute their visions.

Whether delivering a new mission-critical capability, architecting future systems or ensuring cybersecurity and resiliency of critical systems, we are trusted by the Department of Defense (DoD), civil and commercial organizations to perform with speed, accuracy and cost-efficiency.

Leadership and Strategic Partnerships

- Standing shoulder to shoulder with our customers, we partner with them, operating as Chief Architects and Chief Systems Engineers to translate their vision into actionable results.
- Leading operations training management, conducting studies and performing market research, we empower the customer by coordinating and planning across all missions, programs and systems.

Research & Development

- With our deep engagement in cybersecurity, systems engineering and integration, we have the knowledge to develop robust requirements and ensure they are properly implemented by development contractors from prototype to sustainment.
- We engineer the modernization of legacy systems with state of the art, reliable, maintainable, interoperable and standardized hardware and software. Our expertise ensures lifecycle reductions in hardware and software costs outweigh investments.
- Performing technical analysis and tests for system implementation of any enterprise (ground, air or space) allows us to integrate across several

mission areas. This includes development of requirements, standards, specifications, analysis of current infrastructure (baselining) and ultimately creating a solution to support our clients.

Technical Execution

- We focus our processes to provide customers with actionable recommendations to make timely decisions to mitigate risks and improve capabilities with limited funding. We utilize our technical expertise to select the appropriate tools to develop transparent, repeatable decision criteria and trade space.
- Our holistic system of systems view of legacy operational systems and ability to comprehend the dynamics of operational systems eliminates seams between development and operational organizations. We manage technical and program status, technical execution and program integration activities.
- Future architectures demand a trusted mission partner with a track record of innovation. We help you see the possibilities and create documents to put the vision on paper.

The ENSCO Difference: We Help Bring Your Ideas to Reality

We offer a cadre of qualified, cleared and certified engineering experts with direct experience in our customers' domain. They come with vast knowledge of the customer mission, environment and the frameworks, architectures and regulations. This expertise translates into speed and agility that ensures your mission success.

Our technical expertise with legacy, current and future programs is precisely what allows us to deliver an integrated solution to your national security or commercial environment. Our capabilities are multiplied when adding dedication to the mix of industry knowledge and technical expertise.

As a proven SE&I partner, you can count on our commitment to your mission, decades-long expertise and as a trusted source of industry knowledge.

Explore Our Capabilities

- Systems Engineering & Integration
- Future Systems Architecture
- Requirements Definition/Management
- Risk Analysis/Mitigation
- Simulation and Training
- Cybersecurity
- Configuration Management (CM)
- Data Management (DM)
- Acquisition Support
- Integrated Logistics Support (ILS) Analysis
- Test & Evaluation (T&E)
- Independent Verification & Validation (IV&V)

THE ENSCO DIFFERENCE:

Our ability to achieve ATOs (Authority to Operate) and improve the Risk Management Framework (RMF) process.

Our competitors complete on average five per year, while we have completed and maintained ten times as many. The reputation of speed and accuracy we've earned has become the gold standard in our industry.
